DESCRIPTION

The SP Faceplate ICON Push Button Series: Single Gang; faceplate 3" 75mm wide for gang box installation or surface mounting application.

This Series of push switches are heavy duty pushbuttons, designed with SideCik™ Button Guard Defender meet the stringent demands of exit controls. The unique dome button design with only 1/8" pushbutton throw bring a new standard to performance in exit controls pertaining to anti-vandal issues and supporting ADA requirements. Faceplates are fabricated from aircraft grade aluminum with all rounded safety edges. The ICON embossing brings a new level in ease of view and durability combination not found on any other manufactured exit control available in today's market

The SP pushbutton mounting is also

unique and innovative with its full surface metal threaded locking ring versus set screw and plastic currently marketed. In addition the compact actuator and switch design allow a very shallow depth in protrusion into mounting preparation even including the prewired 6 amp @ 125 VAC switch. Two (2) Torx tamperproof security screws are supplied with every unit bring a added finish to the security features. This design and construction are ideal for applications where anti-vandalism, tamper resistance, edge deflection and safety issues are required.

ETI Key ICON Push Button Series, Performance by design can be supplied in numerous, Button Colors and ICON configurations for real world security control pertaining to any facilities specifications

Standard Single Gang
ICON Faceplate
with Dome Push Button

APPLICATION

The SP Faceplate ICON Push Button Series: Push Switches are designed for high traffic areas, such as school, hospital, commercial and store entrances and exits. They can be mounted in Standard Single Gang box or Surface applications.

In addition the SP Series push switches are designed to control overhead doors, electric locks, electro-magnetic locks, electric strikes, automatic doors and handicap operators. They may also be used for request to exit, bypassing alarms, shunting and timed functions. Switches are designed for high frequency usage, in any environment whether indoor or outdoor applications.
